

THE PHILOSOPHY OF GREENHOUSE TOURISM

We aim to build a type of tourism that is framed under the convention on Climate Change. The Concept is based on the millennial goals of Poverty eradication, tackling Climate Change by reducing Carbon emissions, and promoting international Cooperation.

Climate Change is a Challenge that affects us all, being a phenomenon that is caused by contradictions of economic activities we cannot put blame on any body rather acknowledge that in pursuance of human welfare, we have found ourselves faced with big challenge that demands the entire participation of each concerned individual.

While the big emitters of Greenhouse gases have been the beneficiaries of those activities, the low emitters of Air pollutants visa a vis emitters of Cleaner Air consequently have been the victims of Climate Change. Recent forecasts by Inter governmental Panel on Climate Change indicate that the poor Nations will be the most hit parts of the planet and how much Climate Challenge will remain around our necks lies in the future.

Mitigating Climate Change demands a thorough strategy combined by a Joint effort, in exploring Challenge of Climate Change, so we look to the past and explore the Greenhouse effect, so to say that while the enhanced greenhouse effect has been the cause of Climate change due to Air Pollutants since the industrial revolution, we still state there is something to celebrate about the Greenhouse effect in light of its uniqueness in comparison to the entire system of the Universe.

The need to develop Ethical holidays and travels and the Emissions Tourism Trading Scheme in view of establishing a Trade off Clean Air Market Mechanism, calls the reminiscence to explore the very of foundation of Modern Civilisation. In so doing we recite the chapters laid down in the original Greek Classical philosophy and the need to observe the Abrahamic religious movements that have a bearing on our social fabric such as the Judeo-Christian faiths and Islamic Abrahamic based beliefs and faith that may correspond to the theory of Greenhouse tourism, that echoes United Nations Educational and Scientific Cultural Organisation agenda (UNESCO).

Greenhouse itself does not aim to trade the concept, but rather provide a networking trade strategy that cuts across the globe. In so doing we aim to have a service that targets Business to Business, Business to Consumer, Business to Beneficiaries. We will concentrate on research, advocacy, networking, Education and waste management.

While we acknowledge that tourism is not only a vehicle for sustainable development but also a contributor of Climate Change as well, we aim to redefine tourism in the context of the initiative, and in light of tourism impact on Climate Change and Environment.

Albeit, in attempt to ensure natural resource justice we aim to build a tourism that is based upon scientific evidence, statistics, Ethics and how the initiative of Greenhouse Tourism can underscore equity, collaborated sustainability, in terms of investing into greener projects in poor communities towards green, balanced and just world.
